

GAURAV VOHRA

Backend Developer | Java | Spring Boot | Microservices

Solan, HP, India | gaurav999vohra@gmail.com | +91-8894915168 | leetcode.com/u/gauravvohra24/

PROFESSIONAL SUMMARY

Backend Developer with hands-on experience building distributed microservices using Spring Boot and Spring Cloud. Developed a real-world microservices platform featuring Eureka Service Discovery, API Gateway, Config Server, RabbitMQ-based asynchronous messaging, and Keycloak OAuth2 security. Strong foundation in Java 8, REST API design, and PostgreSQL. Passionate about building scalable, secure, and event-driven backend systems.

TECHNICAL SKILLS

Languages: Java 8, SQL, JavaScript (Basic)

Backend: Spring Boot, Spring MVC, Spring Data JPA, REST APIs, Global Exception Handling

Microservices: Spring Cloud, Eureka Server, API Gateway, Config Server

Security: Keycloak (OAuth2 / OIDC), JWT, Role-Based Access Control (RBAC)

Messaging: RabbitMQ — Asynchronous Communication, Event-Driven Architecture

AI Integration: Google Gemini AI API

Databases: PostgreSQL, MongoDB

Tools & Platforms: Git, Postman, Docker, IntelliJ IDEA, Eclipse, Vs code

Frontend (Basic): React, HTML5, CSS3

Problem Solving: 215+ LeetCode problems (Strong understanding of core data structures and algorithms)

EXPERIENCE

Spring Boot Intern – VVDN Technologies, Noida Dec 2025 – Feb 2026

- Completed structured Spring Boot curriculum with hands-on backend implementation
- Designed and developed a distributed Gemini AI Fitness microservices system.
- Implemented Eureka Service Discovery and Spring Cloud Config Server for centralized configuration management.
- Built an API Gateway with JWT validation filter, routing, and centralized request handling.
- Integrated Keycloak OAuth2 for authentication, JWT-based authorization, and RBAC.
- Implemented asynchronous inter-service messaging using RabbitMQ for loose coupling.
- Designed RESTful APIs with input validation, layered architecture, and global exception handling.
- Applied event-driven architecture principles ensuring scalability and service independence.

KEY PROJECT

Gemini AI Fitness Log – Distributed Microservices Platform

Tech Stack: Spring Boot · Spring Cloud · PostgreSQL · Keycloak · RabbitMQ · Gemini AI · Docker

- Architected 3 independent microservices: User Service, Activity Service, and AI Service.
- Integrated Google Gemini AI API to auto-generate personalized fitness insights.
- Secured all endpoints with OAuth2 / JWT and implemented RBAC at gateway level.
- Built event-driven pipeline: Activity Service publishes events to RabbitMQ; AI Service consumes and processes them.
- Implemented user synchronization filter at gateway for seamless onboarding.
- Configured Eureka Service Discovery and centralized configuration using Spring Cloud Config Server.

EDUCATION

Bachelor of Technology – Computer Science Engineering | CGPA: 8.0

Shoolini University, Solan, Himachal Pradesh
